## Schools Need to Adopt Clear Rules for AI Use. Parents Can Help Make That Happen

**Julaine Fowlin**, Medical University of South Carolina

It has been over three years since ChatGPT launched, bringing [artificial intelligence](#) to the masses for the first time. Today, AI is reshaping schools, workplaces and entire industries. Yet only [40 school districts in 17 states](#) — approximately [0.30%](#) — have district-level AI guidance.

The communication gap is stark. [Pew Research](#) found that 26% of teenagers ages 13 to 17 used ChatGPT for their schoolwork in 2024, up from 13% in 2023, yet most lacked formal instruction on responsible use. According to the [Center on Reinventing Public Education](#), nearly three-quarters of parents report that their children's schools haven't shared their AI policies.
